

By ayurvedic theory it defines herpes zoster as **PITTAZ DISEASE**. Due to extra amount of accumulated heat in body it increases the power of virus creates vesicles.

Early detection of boils may recover disease fast.

Early pain in unilateral area of body without developing eruption may results in Herpes.

SEVER BURNING, STRETCHING PAINS

FEVER, IRRITATION OF AREA DUE TO FRICTION

WEAKNESS, SEPTIC INFECTION IN VESICLES, LEAKING, UNCOVERED WOUNDS,Â .

MULTIPLE AREA â€“BUNCH SPOTS SPREADS IN SPIRAL MANNER, ETC.

Recovery may be delayed due to improper treatment.

The most DANGEROUS part is its secondary complication---

Neural damage of that area,

Structural damage, permanent anatomical and physiological disability,

Prolong burning sensation of that area may last up to 1-2 years.

Ayurvedic treatment plays wonderful roll in treatment of it. Ayurvedic medicines has got, **ANTIVIRAL PROPERTIES** which reduces the progress of disease very quickly, it is used orally as well as locally, it avoid complication and definitely reduces prolong irritation and burning sensation which would be a great relief for it. I have treated 200 patients including pregnant herpes zoster, which is a great blessing to medical science.
