

ALCOHOLIC HEPATITIS AND LIVER CIRRHOSIS---

Liver cirrhosis is one of the major disease among the liver diseases. every year thousands of people dies because of it. Alcohol is one of the important cause of it.

Due to irregular and uncontrolled habits of alcohol there are repeated attacks of hepatitis(inflammation of liver)causes further irreversible damage of liver tissue know as liver cirrhosis. many another causes are also present.

At present very limited treatment is available for it. some time due to ascites , intestinal bleeding, jaundice & liver fails causes death. It's a prolong disease to treat.now days we are treating complications of it,but very less treatment is available to recover liver cells,for which we have researched ayurvedic formula which is able to correct liver cells, reduces jaundice. As research shows after 8 months to 1year treatment Patient can live his normal life without alcohol intake.

Jaundice reduces very fast.

We have many authentic pathological and radiological reports for pre and post recovery of disease.

Dose"4-5 types of herbal tablets & with glass of water.

Repeated blood investigations and ultrasonography reports are necessary

Check the recovered reports at testimonials.

Plenty of research work is still continuous.

At least patient has to try to take medicine to recover from this incurable disease.
